

Adtech can offer a printing service as a secondary process to our extruded PTFE tubing and sleeving. This is an inline process that it is carried out after the tube has been extruded.

The PTFE tube can be printed along the length, with no restriction on the number of characters and progressive serial numbers can also be supplied.

This product is currently made to order and is subject to minimum extrusion quantities. However, we are always happy to supply any of our products against a scheduled or call off order over a twelve month period.

As every customer's requirement is different, please contact our customer service team by phone on +44 (0) 1285 762000 or email [sales@adtech.co.uk](mailto:sales@adtech.co.uk), so that we can discuss your exact requirements.
